

In The Name of Almighty
Statistical Pattern Recognition
Dept. of ECE, IUT
Final Project, 1402

Dear students:

In the final project of the Pattern Recognition course, students should work in groups (2 people) and implement at least four diverse classification and pattern recognition methods (including parametric, non-parametric, and other methods) on one of the following relatively challenging public datasets. The application should be selected according to your interests. Due to the diversity of datasets, project titles must not be shared with other students.

Requirements:

- The project must include feature extraction and feature selection.
- Classification using supervised or unsupervised learning methods.
- Methods must be evaluated through comparative analysis.
- Project report should be in the format of a scientific journal paper or technical report, about 10 pages.
- The report must include title, authors, abstract, introduction, theory and algorithm explanation, results, and references.
- Several scientific papers must be studied and used for references.
- Program code file should be uploaded separately.

ICPR Contests

Or other public machine learning and pattern recognition datasets

Project score is maximum 2 points and will be considered in addition to 20. The challenge level of the problem and other factors affect the score. Report submission deadline: 2 Bahman 1402.

Best wishes for your success and with respect

Ahmadzadeh
